The agopt_ex package*

Michael Helmling helmling@mathematik.uni-kl.de

March 29, 2012

Abstract

The agopt_ex package is an aid to generate exercise sheets for the Optimization Research Group, TU Kaiserslautern.

The agopt_ex package defines:

- environments for exercises and solutions,
- two layout variants (classic and modern, respectively, the latter containing a colored AG logo); includes a nice footer and predefined macros for a "in-class" and "take-home" sections,
- various ways to decide whether or not the solutions should be included in the output, including an *auto-magic*® mechanism,
- a number of useful features and macros.

This package documentation shows how to use the package by describing all package options and (re)defined macros. The corresponding source code snippets are included at the appropriate place for easy customization (and, of course, for instructional reasons).

1 Package Loading

1.1 Package Options

Language Settings

german english

Define the language of the exercise sheet. The default is german. This option influences various textual elements of the exercise sheet.

```
1 \def\ublanguage{german}
2 \DeclareOption{german}{
3  \def\ublanguage{german}
4 }
5 \DeclareOption{english}{
6  \def\ublanguage{english}
7 }
```

^{*}This document corresponds to agopt_ex v0.3.1, dated 2012/02/10. Obtain the newest version at http://github.com/supermihi/latex

Toggle Solution Output

solution nosolution These options define whether or not solutions should be included in the output document or not. If neither option is present, auto-magic detection is enabled.

With auto-magic detection, the solutions are output if and only if the jobname contains the string "olution" (in english mode) or "oesung" (in german mode). Note that this is not a typo; the first letter is omitted in order to be case insensitive. If you need a different detection string, redefine the \solutionfilename macro.

The jobname is normally the name of the source file without the .tex extension, but can be overridden in (pdf)latex, xelatex etc. with the -jobname=NAME option. This allows for a convenient workflow: Create a single .tex file, e.g. exercise1.tex, then run

- xelatex exercise1
- xelatex -jobname=solution1 exercise1

(substitude xelatex with your favourite LTEX engine, e.g. pdflatex, latex, ...) in order to generate exercise1.pdf (without solutions) and solution1.pdf (including solutions). The bash script xeloetex distributed together with this package shows how to merge both steps into one command that can be used as compile command in your favourite TFX editor.

- 8 \newif\ifautoshowanswers
- 9 \newif\ifshowanswers
- 10 \showanswersfalse
- 11 \autoshowanswerstrue
- 12 \DeclareOption{solution}{\showanswerstrue\autoshowanswersfalse}
- 13 \DeclareOption{nosolution}{\showanswersfalse\autoshowanswersfalse}

Choose Layout

modern

classic Defines the style of the exercise sheet. modern uses a colored graphical logo of the AG in the title (as in this document). classic resembles the classical exercise sheet style which hasn't changed for the past 30 vears.

- 14 \newif\ifmodern
- 15 \DeclareOption{modern}{\moderntrue}
- 16 \DeclareOption{classic}{\modernfalse}
- 17 \moderntrue % the default

This closes the options section.

18 \ProcessOptions\relax

1.2 **Fonts**

The package configures TFX to use fonts of the Linux Libertine (4) family and the Euler math font. The implementation differs for (pdf)latex and xelatex. For this package to work with xelatex, you need to have the Linux Libertine and Linux Biolinum OpenType fonts installed.

- 19 \RequirePackage{ifxetex}
- 20 \RequirePackage{ifthen}
- 21 \ifxetex

```
\RequirePackage{amsfonts,amssymb}
   \RequirePackage{euler}
24 \RequirePackage{xltxtra}
25 \RequirePackage{xunicode}
26 \RequirePackage{polyglossia}
   \defaultfontfeatures{Mapping=tex-text} % needed for -- and --- to work
   \setromanfont[Numbers=Proportional]{Linux Libertine 0}
   \setsansfont[Numbers=Proportional]{Linux Biolinum 0}
   \ifthenelse{\equal{\ublanguage}{german}}{
   \setdefaultlanguage{german}
31
32
    \setdefaultlanguage[variant=american]{english}
33
34 }
35 \else
   \ifthenelse{\equal{\ublanguage}{german}}{
    \usepackage[ngerman]{babel}
37
38
    \usepackage[american]{babel}
39
   }
40
    \RequirePackage{libertine}
41
42
    \RequirePackage[T1]{fontenc}
   \usepackage{euler}
44
45\fi
```

1.3 Required Packages

The following packages are needed by agopt_ex:

```
46 \RequirePackage{amsmath}
47 \RequirePackage{geometry}
48 \RequirePackage{hyperref}
49 \RequirePackage{fancyhdr}
50 \RequirePackage{zref-totpages}
51 \RequirePackage{prettyref}
52 \RequirePackage{url}
53 \RequirePackage{xspace}
```

2 Providing Lecture and Exercise Parameters

The following lecture and tutorial data should be set in every exercise sheet.

\Lecture Specify the name of the lecture (e.g. "Praktische Mathematik: Lineare und Netzwerkoptimierung").

54 \def\Lecture#1{\def\lecture{#1}}

\LectureShort Specify a short name of the lecture, used in the footer (e.g. "PraMa Optimierung").

55 \def\LectureShort#1{\def\lectureshort{#1}}

\Sheetnumber Specify the exercise sheet number.

56 \def\Sheetnumber#1{\def\sheetnumber{#1}}

```
\Deadline Specify the deadline for turn-in exercises. May include additional information such as "in the lecture" or
               "into the mailboxes in building 48".
               57 \def\Deadline#1{\def\deadline{#1}}
               Specify the date when the sheet was issued.
  \IssueDate
                58 \def\IssueDate#1{\def\issuedate{#1}}
   \Lecturer Specify the name of the lecturer.
                59 \def\Lecturer#1{\def\lecturer{#1}}
   \Operator Specify the name of the exercise operator.
                60 \def\Operator#1{\def\operator{#1}}
               Specify the current semester or term (e.g. "winter term 2012").
   \Semester
               61 \def\Semester#1{\def\semester{#1}}
   \Homepage
               This optional parameter defines a homepage for the exercises. If it is used, the document output will
               contain a note where to download exercises.
                62 \def\Homepage#1{\def\homepage{#1}}
\Inclassdate
               This optional parameter defines the date for in-class exercises.
                63 \def\InclassDate#1{\def\inclassdate{#1}}
               The parameters defined by the above macros can be accessed by their lowercase equivalents.
                64 \def\lecture{Default lecture name}
                65 \def\lectureshort{PraMa Optimierung}
                66 \def\sheetnumber{1}
                67 \def\deadline{24.12.1970}
                68 \def\issuedate{06.12.1970}
                69 \def\lecturer{Lecturer}
                70 \def\operator{Exercise Operator}
                71 \def\semester{Semester}
                72 \def\homepage{}
```

2.1 Change Default Textual Elements

The words used for "Exercise", "Sheet" etc. can be modified by redefining the following commands:

```
73 \ifthenelse{\equal{\ublanguage}{german}}{
```

- 74 $\def\solutiontext\{L\"osung\}$
- 75 \def\exercisetext{Aufgabe}
- 76 \newcommand{\exercisesheettext}{\"Ubungsblatt}
- 77 \def\withsolutiontext{mit L\"osung}
- 78 \def\pagetext{Seite}
- 79 \def\pointstext{Punkte}
- 80 \def\solutionsheettext{L\"osungsblatt}
- 81 \def\deadlinetext{Abgabe bis}
- 82 \def\solutionfilename{oesung}
- 83 \def\lecturetext{Vorlesung}

```
\newcommand{\exercisestext}{\"Ubungen}
    \newcommand{\homepagetext}{Dieses \"Ubungsblatt sowie weitere %
    Informationen zur \"Ubung sind unter \url{\homepage} erh\"altlich.}
86
    \newcommand{\inclasstexttitle}{Pr\"asenz\"ubungen}
    \newcommand{\inclasstext}{(Zur Bearbeitung in der \"Ubung am \inclassdate)}
    \newcommand{\takehometexttitle}{Haus\"ubungen}
    \newcommand{\takehometext}{Bitte bis \deadline{} abgeben.}
    \newcommand{\deadlinepre}{\textbf{Abgabefrist: }}
92 }{
    \def\solutiontext{Solution}
93
    \def\exercisetext{Exercise}
94
    \def\exercisesheettext{Exercise Sheet}
96 \def\solutionsheettext{Solution Sheet}
97 \def\withsolutiontext{including solutions}
    \def\pagetext{Page}
    \def\pointstext{points}
    \def\deadlinetext{Due date:}
100
    \def\solutionfilename{olution}
101
    \def\lecturetext{Lecture}
102
    \def\exercisestext{Exercises}
103
    \newcommand{\homepagetext}{Download of exercises at \url{\homepage}}
105
    \newcommand{\inclasstexttitle}{In-Class Exercises}
    \newcommand{\inclasstext}{(To be done in the tutorial on \inclassdate)}
106
    \newcommand{\takehometexttitle}{Turn-In Exercises}
107
    \newcommand{\takehometext}{Please hand in by \deadline{}}
    \newcommand{\deadlinepre}{\textbf{Deadline: }}
110 }
```

For example, if you wish to name exercises "Problem" rather than "Exercise", simply put

\renewcommand{\exercisetext}{Problem}

in your preamble.

3 Typesetting Exercises and Solutions

3.1 Exercises

exercise

The exercise environment is used in the following way: $\begin{exercise} [\langle title \rangle] \ \{\langle points \rangle\} \end{exercise}$

. . .

\end{exercise}

The parameter $\langle points \rangle$ will be typeset in parenthesis after the exercise title, unless it is empty. If the optional $\langle title \rangle$ is given, the exercise title is typeset after the exercise number, separated by an endash (-). Exercises are numbered by a special counter (exercise); the number is displayed in the style x.y where x is the sheet number and y the exercise number on the sheet. You can thus use \label and \ref for exercise referening as well as \theexercise to output the current exercise number.

As an example, the code

\begin{exercise}[\$P \neq NP\$]{4}

```
Prove that $P$ is a proper subset of $NP$.
 \end{exercise}
will be output as
Exercise 1.1 – P \neq NP (4 points)
Prove that P is a proper subset of NP.
\label{limit} $$111 \rightarrow {\epsilon}_{1}\exp(2.5mm)\rightarrow {\epsilon}_{1}^2 -2.5mm} $$
112 \newcounter{exercise}
113 \setcounter{exercise}{0}
114 \newenvironment{exercise}[2][{}]%
115 {%
116 \refstepcounter{exercise}
117 \exheader{\exercisetext{} \sheetnumber.\arabic{exercise}
118 \ifthenelse{\equal{#1}{}}{}-- #1}
119 \ifthenelse{\equal{#2}{}}{(#2 \pointstext)}}
120 }%
121 {\par\vspace{2mm}}
Subexercises can be typeset with usual \enumerate environments. In order not to mix up exercise and
and the second order to arabic:
```

subexercise numbering, this package sets the first-order enumeration labelling to alphabetic numbering

```
122 \RequirePackage{enumitem}
123 \setlist[enumerate,1]{label=\alph*)}
124 \setlist[enumerate,2]{label=\arabic*.}
```

3.2 Solutions

solution

The solution environment can be used to create a sample solution. You can decide whether or not solutions will be included in the output, in order to distinguish between exercise and solution sheets (see Section 1.1).

The solution environment is used as follows:

```
\begin{solution}
 \end{solution}
For example, the code
 \begin{solution}
   Base clause: Let $N=1$, then obviously $P=NP$.
 \end{solution}
will be output to (if solution output is active)
Solution 1.1:
```

Base clause: Let N = 1, then obviously P = NP.

The agopt_ex Package

Documentation

Implementation of the Auto-Magic Solution Feature

If neither solution nor nosolution is provided as package option, test if the \jobname contains the (language specific) word for "solution". The test requires the xstring package.

```
126 \ifautoshowanswers
127 \RequirePackage{xstring}
128 \IfSubStr*{\jobname}{\solutionfilename}{
129 \showanswerstrue
130 }{
131 \showanswersfalse
132 }
133 \fi
134 \newenvironment{solution}%
135 {%
136 \ifshowanswers
       \exheader{\solutiontext{} \sheetnumber.\arabic{exercise}:}
137
138
       \par\vspace*{0pt}%
139
140
       \setbox\z@\vbox\bgroup
141 \fi
142 } { %
143 \ifshowanswers
      %
144
145 \else
146
       \egroup
147 \fi
148 }%
```

In-Class and Take-Home Exercises

\takehome

\inclass These optional macros create a title that marks the begin of the "in-class" or "take-home" part, respectively, of the exersice sheet.

```
149 % marks if an exercise type (inclass, takehome) was explicitly chosen, because otherwise the layout
150% has to automatically print the deadline information.
151 \newif\ifexplicittype
152 \explicittypefalse
153 \newcommand{\inclass}{\par{\large
154\ifmodern\textsc{\inclasstexttitle}\else\MakeUppercase{\inclasstexttitle}\fi}\\
155 (\inclasstext)\par
156 \explicittypetrue
157 }
158 \newcommand{\takehome}{\par{\large
159 \ifmodern\textsc{\takehometexttitle}\else\MakeUppercase{\takehometexttitle}\fi}\\
160 (\takehometext)\par
161 \explicittypetrue
162 }
```

4 Miscellaneous Features

4.1 PDF parameters

This package sets some PDF parameters according to the exercise sheet definition.

```
163 \hypersetup{%
164 pdftitle={\lecture, \exercisesheettext{} \sheetnumber}, %
165 pdfauthor={Optimization Research Group}, %
166 pdfcreator={\ifxetex XeLaTeX \else LaTeX2e \fi}}
```

4.2 Referencing Exercises and Solutions

This package defines to reference formats for the prettyref package which can be used to reference exercises and solutions, respectively. Example:

```
Use the graph of \prettyref{ex:dijkstra} and ...
Would be typeset as, say,
    Use the graph of Exercise 2 and ...
167 \newrefformat{ex}{\exercisetext^\ref{#1}}
```

168 \newrefformat{solution}{\solutiontext~\ref{#1}}

4.3 Headers and Footers

agopt_ex uses fancyhdr to set an empty header and a nice footer. You can modify the following default layout if you wish.

```
169 \pagestyle{fancy}
170 \fancyhead{}
171 \renewcommand{\headrulewidth}{0pt}
172 \renewcommand{\footrulewidth}{.4pt}
173 \cfoot{\ifshowanswers\solutionsheettext{}\else\exercisesheettext{}\fi{} \sheetnumber}
174 \rfoot{\pagetext{} \thepage/\ztotpages}
175 \lfoot{\lectureshort}
```

5 Implementation of the Layouts

The modern layout uses tikz to draw the logo.

```
176\ifmodern
177\RequirePackage{tikz}
178\definecolor{tublau}{rgb}{0.125,0.34,0.68}
179\renewcommand{\maketitle}{
180\hrule\vspace{2mm}
181\begin{minipage}{0.55\textwidth}
182 {\sffamily \lecture{} / \semester\\
183\LARGE \scshape \exercisesheettext{} \sheetnumber %
184\ifshowanswers%
185 {\Large{} (\withsolutiontext)}%
186\fi\\
```

```
187 \small \upshape \itshape \rmfamily \deadlinetext{} \deadline{}}
188 \end{minipage}
189 \begin{minipage}{0.44\textwidth}
190 \begin{flushright}
191 \begin{tikzpicture}[klumpen/.style={minimum size=4mm,rectangle},
                       every edge/.append style={very thick},scale=.9]
193 \node[fill=red,klumpen] (k1) at (0,0) {};
194 \node[fill=tublau,klumpen] (k2) at (2,0) {} edge (k1);
195 \node[fill=tublau,klumpen] (k3) at (2,-1) {} edge(k2);
196 \node[fill=red,klumpen] (k4) at (5,-1) {} edge(k3);
\label{localize} $$197 \rightarrow [font={sffamily}] at (1,-.5) {OPT}; $$
198 \node[font={\sffamily\fontsize{8}{7}\selectfont},anchor=west] at (2.3,-.5)
      {\begin{minipage}{2.6cm}Optimizaton\\Research Group\end{minipage}};
200 \end{tikzpicture}
201 \end{flushright}
202 \end{minipage}\vspace{2mm}\hrule
203 \begin{center}\small
204 \textbf{\lecturetext:} \lecturer\\
205 \textbf{\exercisestext:} \operator
206 \end{center}\vspace{-2mm}
207 \ifthenelse{\equal{\homepage}{}}{}
208 {\small \homepagetext}
209 }
210 }
This is the implementation of the classic layout.
212 \renewcommand{\maketitle}{
213 \begin{minipage}{0.49\textwidth}
214 \begin{flushleft}
